Application No.: 09/895546 Docket No.: CSC-033

AMENDMENTS TO THE CLAIMS

Please amend claims 1-11 as follows:

1. (Currently Amended) A method of operating a phosphoric acid-fuel cell comprising an anode electrode, a cathode electrode, and an electrolyte layer interpose between said anode electrode and said cathode electrode, said electrolyte layer including a matrix composed of basic polymer impregnated with acidic liquid electrolyte, comprising the steps of:

supplying hydrogen-containing gas <u>from a hydrogen storage source</u> to said anode electrode;

supplying oxygen-containing gas to said cathode electrode; and operating said phosphoric acid-fuel cell in a state in which a pressure on said cathode electrode is higher than a pressure on said anode electrode.

- 2. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 1, wherein a ratio between an absolute pressure on said cathode electrode and an absolute pressure on said anode electrode is not more than 2.
- 3. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 1, wherein any one of phosphoric acid, sulfuric acid, and methylsulfonic acid is used as said liquid electrolyte.
- 4. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 3, wherein a ratio between an absolute pressure on said cathode electrode and an absolute pressure on said anode electrode is not more than 2.
- 5. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 1, wherein a material, which has a structural unit of monomer of secondary amine, is used as said basic polymer

Application No.: 09/895546 Docket No.: CSC-033

6. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 5, wherein a ratio between an absolute pressure on said cathode electrode and an absolute pressure on said anode electrode is not more than 2.

- 7. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 5, wherein any one of phosphoric acid, sulfuric acid, and methylsulfonic acid is used as said liquid electrolyte.
- 8. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 1, wherein polybenzimidazole is used as said basic polymer having said structural unit of said monomer of said secondary amine.
- 9. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 8, wherein a ratio between an absolute pressure on said cathode electrode and an absolute pressure on said anode electrode is not more than 2.
- 10. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 8, wherein any one of phosphoric acid, sulfuric acid, and methylsulfonic acid is used as said liquid electrolyte.
- 11. (Currently Amended) The method of operating said phosphoric acid-fuel cell according to claim 10, wherein a ratio between an absolute pressure on said cathode electrode and an absolute pressure on said anode electrode is not more than 2.
